

Geeves.Life — QA Testing Guide for Eniola

Date: June 20, 2026

Prepared by: Supah-T / Geeves.Life

Tester: Eniola (Executive Assistant)

Environment: <https://geeves.manus.space>

Overview

This document covers five testing areas in sequence. Please complete them in order, as some later tests depend on setup done in earlier ones. For each test, note the result (Pass / Fail / Partial) and any screenshots or observations.

Your role: You are logged in as an **Executive Assistant (EA)**. This role gives you full calendar access, the ability to manage bookings, and — as of this build — the ability to invite new household members. You will use this invite capability in Section 4 to set up Cary's account.

Section 1 — Outbound iCal Setup (All Three Properties)

Background

Each property has a **Geeves.Life Outbound ICS URL** — a live `.ics` file hosted on S3 that contains all confirmed bookings plus prep-day blocks. This URL must be subscribed to in Airbnb, VRBO, and Booking.com so those platforms block the correct dates automatically.

All three URLs have now been generated. Your first task is to paste them into each platform's iCal import field.

Outbound ICS URLs

Property	Outbound ICS URL
Sunset Studio	<code>https://d2xsxph8kpxj0f.cloudfront.net/310519663295472478/mhfpBZgGttr5P7pgfv7LpQ/property-ical/Ln-_SMF7Nrt1uXsQcdP9C/availability.ics</code>
Morabeza	<code>https://d2xsxph8kpxj0f.cloudfront.net/310519663295472478/mhfpBZgGttr5P7pgfv7LpQ/property-ical/nJnk4hr3AxZJZ-RkwhRJy/availability.ics</code>
The Artiste's Boutique	<code>https://d2xsxph8kpxj0f.cloudfront.net/310519663295472478/mhfpBZgGttr5P7pgfv7LpQ/property-ical/ZI2Zy70uLGyF-vmW0AII-/availability.ics</code>

You can also copy these URLs from within the app: go to **Properties** → **[Property Name]** → **Platforms tab** → **“Copy URL”** button next to “Outbound ICS.”

Steps per Platform

Airbnb:

- Log in to Airbnb Host → Listings → [Property] → Availability → Sync Calendars
- Click **“Export Calendar”** to get the Airbnb inbound URL (paste this into Geeves.Life as the inbound feed)
- Click **“Import Calendar”** → paste the Geeves.Life Outbound ICS URL above
- Repeat for all three properties

VRBO / Vrbo:

- Log in to VRBO Owner → [Property] → Calendars → Import Calendar

2. Paste the Geeves.Life Outbound ICS URL
3. Repeat for all three properties

Booking.com:

1. Log in to Booking.com Extranet → [Property] → Calendar → iCal Sync
2. Under “Import Calendar” paste the Geeves.Life Outbound ICS URL
3. Note: Booking.com may show “Activating” for up to 30 minutes after pasting — this is normal
4. Repeat for all three properties

Verification

After setup, open each ICS URL directly in a browser — it should download a `.ics` file. Open it in a text editor or import it into Google Calendar temporarily to confirm it contains `BOOKED` and `PREP TIME` events.

Test	Expected	Result
Sunset Studio ICS URL is accessible	Downloads a <code>.ics</code> file with events	
Morabeza ICS URL is accessible	Downloads a <code>.ics</code> file with events	
Artiste’s Boutique ICS URL is accessible	Downloads a <code>.ics</code> file with events	
Airbnb shows Geeves.Life calendar as imported	Status: Active (not “Activating”)	
VRBO shows Geeves.Life calendar as imported	Status: Active	
Booking.com shows Geeves.Life calendar as imported	Status: Active (may take 30 min)	

Section 2 — Sunday & Holiday Prep Rule Verification

The Rule (as designed)

The Sunday and Holiday prep rules do **not** block all Sundays or all holidays as check-in days. They are narrowly scoped:

If the cleaning window between two consecutive bookings falls entirely on a Sunday or national holiday, a blocking event is automatically added to prevent a same-day turnover that would force cleaning on those days.

The rule does **not** prevent guests from checking in on Sundays or holidays in general — it only triggers when a checkout creates a cleaning obligation on those days.

Current Rule Settings

Property	Days Before	Days After	Block Sundays	Block Holidays	Country
Sunset Studio	1	1	✔ Yes	✔ Yes	US
Morabeza	1	1	✔ Yes	✔ Yes	US
The Artiste’s Boutique	1	1	✔ Yes	✗ No	JM

How to Verify a Block

1. Open the property’s Outbound ICS URL in a browser (download the `.ics` file)
2. Import it into Google Calendar (temporary import is fine)

3. Navigate to the specific date in question
4. Confirm a **PREP TIME** or **BLOCKED** event covers that date

Test Cases — Sunset Studio (US, blockSundays + blockNationalHolidays)

#	Guest	Checkout	Checkout Day	Rule Triggered	Block Expected On	First Valid Check-in
1	Reserved - Carol	Jul 26, 2026	Sunday	Checkout on Sunday	Jul 26–27	Jul 28 (Mon)
2	Reserved - Earnest	Jul 19, 2026	Sunday	Checkout on Sunday	Jul 19–20	Jul 21 (Mon)
3	Reserved - Nancy	Jul 12, 2026	Sunday	Checkout on Sunday	Jul 12–13	Jul 14 (Mon)
4	Reserved - Josh	Jul 5, 2026	Sunday	Checkout on Sunday	Jul 5–6	Jul 7 (Mon)
5	Reserved - Boryana	Jun 7, 2026	Sunday	Checkout on Sunday	Jun 7–8	Jun 9 (Mon)
6	Reserved - Daniel	Oct 11, 2026	Sunday	Checkout on Sunday + prep day falls on Columbus Day (Oct 12)	Oct 11–13	Oct 13 (Tue)
7	Reserved - Arianna	May 10, 2026	Sunday	Checkout on Sunday	May 10–11	May 12 (Mon)
8	Reserved - Ciara	May 3, 2026	Sunday	Checkout on Sunday	May 3–4	May 5 (Mon)

Test Cases — Morabeza (US, blockSundays + blockNationalHolidays)

#	Guest	Checkout	Checkout Day	Rule Triggered	Block Expected On	First Valid Check-in
1	Booking.com Reservation	Jun 28, 2026	Sunday	Checkout on Sunday	Jun 28–29	Jun 30 (Mon)
2	Booking.com Reservation	Jun 21, 2026	Sunday	Checkout on Sunday	Jun 21–22	Jun 23 (Mon)
3	Booking.com Reservation	Jul 26, 2026	Sunday	Checkout on Sunday	Jul 26–27	Jul 28 (Mon)
4	Reserved - Angie	Jul 12, 2026	Sunday	Checkout on Sunday	Jul 12–13	Jul 14 (Mon)
5	Reserved - Xing	May 24, 2026	Sunday	Checkout on Sunday + prep day falls on Memorial Day (May 25)	May 24–26	May 26 (Tue)
6	Booking.com Reservation	Aug 22, 2026	Saturday	Prep day (Aug 23) falls on Sunday	Aug 23 blocked	Aug 24 (Mon)

Test Cases — The Artiste’s Boutique (JM, blockSundays only)

#	Guest	Checkout	Checkout Day	Rule Triggered	Block Expected On	First Valid Check-in
1	Reserved - Lisa	Jun 20, 2026	Saturday	Prep day (Jun 21) falls on Sunday	Jun 21 blocked	Jun 22 (Mon)
2	Reserved (Jul booking)	Jul 25, 2026	Saturday	Prep day (Jul 26) falls on Sunday	Jul 26 blocked	Jul 27 (Mon)
3	Reserved (Aug booking)	Aug 1, 2026	Saturday	Prep day (Aug 2) falls on Sunday	Aug 2 blocked	Aug 3 (Mon)

Pass Criteria

For each test case: open the outbound ICS and confirm a **PREP TIME** or **BLOCKED** event covers the “Block Expected On” date range. If the block is missing, mark as **Fail** and note the case number.

Section 3 — Email Scraping Status Check

Current Status

Before testing the full member flow, verify that email scraping is working so guest and financial data is visible in the app.

Property	Property Email	Total Bookings	Guest Data	Revenue Data	Status
Sunset Studio	tarikp.us@gmail.com	27	0 (0%)	0 (0%)	✗ Not scraped
Morabeza	tarikp.us@gmail.com	18	0 (0%)	0 (0%)	✗ Not scraped
The Artiste's Boutique	tarikp.us@gmail.com	12	1 (8%)	0 (0%)	⚠ Partial
Apartment #1	(not set)	0	—	—	⚠ No email configured
Apartment #2	(not set)	0	—	—	⚠ No email configured

Email scrape jobs run to date: 0 — no scraping has been triggered yet.

Steps to Trigger Scraping

1. Log in to Geeves.Life as the owner
2. Go to **Properties** → **[Property Name]** → **Platforms tab**
3. Click **“Scrape Emails”** (or equivalent button) to trigger a scrape job for that property
4. Wait for the job to complete (progress shown in the UI)
5. Refresh the bookings list — guest names, emails, and revenue should now populate

Verification

Test	Expected	Result
Scrape job starts without error	Status changes to “running”	
Scrape job completes	Status changes to “done”; emails scanned > 0	
Sunset Studio bookings show guest names	At least some bookings have guestName populated	
Morabeza bookings show guest names	At least some bookings have guestName populated	
Revenue data appears	At least some bookings show totalPrice or netAmount	
No financial data visible to member accounts	Verified in Section 4 below	

If scraping fails: Note the error message shown in the UI and report back. The most likely cause is that the Gmail OAuth token for `tarikp.us@gmail.com` needs to be re-authorized.

Section 4 — New Member Flow (Full End-to-End)

This section tests the complete lifecycle of creating a new household member, verifying their access, and confirming that privacy rules are enforced.

4A — Invite a New Member (as Eniola / EA)

As an Executive Assistant, you have permission to send member invites. You do **not** need to log in as the owner for this step.

1. Log in to Geeves.Life as yourself (Eniola)
2. Go to **Household Members** in the left sidebar (the Constellation screen)
3. Click **“Invite Member”**
4. Fill in:
 - Name: `Cary` (use Cary’s actual email address so he can receive the invite)
 - Role: `Member`
 - Relationship: `Friend` (or appropriate)
5. Click **“Send Invite”**

Expected: The invite button shows a spinner briefly, then a success toast appears. An email arrives at Cary’s inbox with an invitation link.

Test	Expected	Result
Invite button is visible to Eniola (EA role)	“Invite Member” button appears on the Constellation screen	
Invite sends without spinning forever	Completes within 10 seconds	
Invite email received by Cary	Email arrives within 2 minutes	
Invite email contains a valid link	Link is clickable and goes to Geeves.Life	

4B — Accept the Invite and Log In (as Cary)

1. Cary opens the invite email
2. Cary clicks the invite link
3. Cary logs in using his Google account (the email used for the invite)

4. He should land on the Geeves.Life member dashboard

Test	Expected	Result
Invite link works	Redirects to Geeves.Life login	
Login completes	Member dashboard loads	
Member name shown correctly	Shows “Cary” or his name	

4C — Calendar Access Verification (as Cary)

As the new member (Cary), verify the calendar shows the correct information.

1. Go to **Calendar** in the member dashboard
2. Observe what is visible

Expected behavior:

- Owner’s calendar shows as **all blocked out** (availability blocks only — no event titles, descriptions, or details)
- Property arrival and departure dates are visible
- Multi-day ongoing stays (e.g., a guest staying for 7 days) are **not** shown unless the “Exclude multi-day events” toggle is off
- No financial data (revenue, pricing) is visible anywhere on the calendar
- No guest personal information (guest names, emails, phone numbers) is visible

Test	Expected	Result
Calendar loads for member	Calendar view renders without error	
Owner’s time shows as blocked	Busy blocks visible, no event details	
Property arrivals/departures visible	Check-in/check-out markers shown	
No financial data visible	No revenue, pricing, or commission figures	
No guest PII visible	No guest names, emails, or phone numbers	
Member cannot edit or delete events	Edit/delete buttons absent or disabled	

4D — Property Gantt Chart Access (as Cary)

As the new member (Cary), verify the Property Gantt chart shows limited details.

1. Go to **Properties** in the member dashboard (if visible)
2. Open the Gantt/timeline view for a property that has been approved for this member

Expected behavior:

- Gantt chart shows booking bars (dates blocked)
- No guest names on the bars (or anonymized as “Guest”)
- No revenue figures
- No platform-specific booking details
- Member cannot click through to booking details

Test	Expected	Result
Properties section accessible to member	Properties tab visible in navigation	
Gantt chart loads	Timeline renders with booking bars	
Guest names anonymized	Bars show “Guest” or no name, not real guest names	
No financial data on Gantt	No revenue, pricing, or commission figures	
Booking detail click disabled	Clicking a bar does not open full booking details	

4E — Meeting/Booking Request (as Cary)

As the new member (Cary), test the ability to request free time with the owner.

1. Go to **Calendar**
2. Find a time slot that appears free (not blocked)
3. Click on the free slot or use the “Request Time” button
4. Fill in the request details and submit

Expected behavior:

- Member can see which times are free (owner’s busy blocks are visible, free slots are clear)
- Member can submit a meeting request for a free slot
- Owner receives a notification of the request
- Member cannot see the reason why a slot is busy (no event details, just “Busy”)

Test	Expected	Result
Free slots are identifiable	Some time slots appear unblocked	
Meeting request form opens	Dialog/form appears on click	
Request submits successfully	Success toast appears	
Owner receives notification	Check owner account for notification	
Busy slot details hidden	Clicking a busy slot shows “Busy” only, no details	

4F — Member Permissions Verification (Owner Side)

Switch back to the owner account and verify the Member Permissions settings for Cary.

1. Log in as owner (Supah-T)
2. Go to **Member Permissions** in the left sidebar
3. Select **Cary** from the Member dropdown
4. Leave the Vertical Filter set to **All Verticals** to see the full picture

Expected — Action Permissions section:

- Cary’s role (Member) is shown with a badge
- Permission groups are collapsible (Household, Calendar, Bookings, etc.)
- Role-default permissions are toggled on; non-default are off
- You can toggle any permission on/off; an “Override” badge appears when a permission differs from the role default
- The reset (↺) button reverts a permission back to the role default

Expected — Data Visibility section:

- Each vertical Cary has access to shows access level and calendar access dropdowns
- Four data category toggles appear per vertical (Financial, Private, Guest Information, Operational)
- Toggling “Financial Data” to hidden means Cary cannot see revenue figures

Expected — EA Delegation toggle (top right, owner only):

- Toggle labelled “EA Can Manage Permissions” is visible
- When turned off, Eniola can no longer access this page

Test	Expected	Result
Cary appears in the Member dropdown	Selectable with “Member” role badge	
Action Permissions section loads	Permission groups visible and collapsible	
Permission toggle saves	Toggle a permission, refresh — change persists	
Override badge appears	Badge shows “Override: Granted” or “Override: Revoked”	
Reset button reverts override	Click ↺, badge disappears, permission returns to role default	
Data Visibility section loads	Verticals listed with access level dropdowns	
Financial data toggle saves	Toggle off, refresh — persists	
EA Delegation toggle visible to owner	Toggle shown in top-right of page	
EA Delegation toggle hidden from Eniola	Eniola does not see the EA delegation toggle	

Section 5 — Known Issues & Gaps to Note

The following items are known gaps that are **not** expected to pass in this testing round. Please note them as “Known Gap” rather than “Fail.”

Item	Status	Notes
Email scraping not yet triggered	✗ No jobs run	Guest names and revenue data will be absent until scraping is triggered manually.
Apartment #1 and #2 have no property email	⚠ Config gap	Email scraping cannot run for these properties until a property email is set.

Reporting

Please complete this document by filling in the **Result** column for each test table. Use:

-  **Pass** — works as expected
-  **Fail** — does not work; describe what happened
-  **Partial** — partially works; describe what is missing
-  **Known Gap** — listed in Section 5 above

Return the completed document to Supah-T when done. Screenshots are helpful for any Fail or Partial results.
